

1. DATE - TIME GROUP 13 March 65 14/0015Z	2. LOCATION Rochester, New York
3. SOURCE Civilian	10. CONCLUSION AIRCRAFT
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION Not Reported	11. BRIEF SUMMARY AND ANALYSIS Witnesses watch sky in pursuit of hobby and observed a glowing disc moving across the sky. Too fast for Satellite, no blinkers. Observed in Western sky. Too slow for meteor. Not ECHO because ECHO was due next morning. COMMENTS: Witnesses reported on what object was NOT rather than giving data for identification. Significant that a/c and satellites were mentioned. Pegasus passed over at 1946 about 1/2 hour later and ECHO II went by at 1857 about 18 minutes earlier. Possible that ECHO II was observed but more likely the sighting was triggered by an a/c observation. Speed of too fast for satellite to slow for meteor (apparent speed) is consistent with a/c observation. Lack of flashing light does not eliminate a/c as a cause of observation. Possible aircraft.
6. TYPE OF OBSERVATION Ground-Visual

Dear Sir:

Sir, we are writing to you on behalf of our hobby. We watch the stars and watch for Unidentified flying Objects. (U.f.O.) We would like (our u.f.O. study group) some pamphlets on flying saucers and other U.f.O.'s, and aerial phenomena that have been seen or recorded. We ourselves at one time saw something that looked like a glowing disk slowly moving across the sky. It was too fast for a satellite and it had no blinkers so it couldn't be an airplane. Here is some more data on this object. The date was March 13, 1965 and the time was approx 7:15 PM. The place was Salina St. in my town. We saw it in the Western sky when it was dark. It wasn't a meteor because it was moving

too ~~slowly~~ slowly. It wasn't the echo satellite
because it was scheduled for the next morning.
We sincerely hope you will answer our
letter. We aren't crackpots. We are serious.

Sincerely Yours,

[REDACTED]
